You get asked a random set of questions, then you need to answer them, by making flashcards or typing the answer. When learning a new language or simply testing the knowledge you acquired on other topics, a specialized software solution can make you take the edge off a little bit. Betakat is one such utility. Minimalist GUI The main window of Betakat is pretty basic and simplistic, which makes sense considering the app is targeted at both novices, and tech-savvy users. You can start by creating a new deck and assign it a relevant title, so you can quickly identify it later on. Next, you can add questions and enter the corresponding answers, while keeping in mind that the answers are case sensitive. Gradually, as you populate each deck with content, you can explore a list with the current questions, remove the redundant ones or modify them with a single mouse click. Extensive hotkey support What sets Betakat apart from other similar apps is that you can perform all its supported actions using exclusively your keyboard. In other words, you only need to get familiarized with a bunch of hotkeys, before you can create new decks, add questions or reveal the current answer, all without touching the mouse. Unfortunately, you do not have the possibility to customize these hotkeys as you see fit, as they are hard coded in the app. Flashcard approach Meant to encourage you to improve your skills in whatever field interests you, Betakat uses the flashcard approach to test your knowledge. Basically, the question is displayed on one side of the card, then you can flip it and view the answer if you are unsure. Conclusion All in all, Betakat is a nice tool for assessing your skill level on various topics, no matter if you are a beginner when it comes to computers. Also, it is currently a work in progress, so additional features are bound to follow in the future. 3) How do you know it works? The success of the quiz depends on your intelligence. If you are more intelligent than the average computer user, it will work for you. If you are less intelligent than the average computer user, it will probably be extremely frustrating. 4) What's your competitive strategy? In the short term, we are going to look at the use of flashcards to make the experience more enjoyable. This will be a small add-on that appears in the bottom right hand corner of the screen. The user can tap on the cards to reveal the answer, or simply tap and hold the card to bring b7e8fdf5c8

Brief introduction of Betakat: Betakat is a computer game that simulates a flash card game. It was originally based on an idea from a project in Japan in the 80's with the same name. Since we no longer use Japanese Kanji, we decided to change the name to Betakat, which we felt was more appropriate to our version. The man who previously called illegal immigrants "rapists" and "murderers" and said he would "immediately terminate" the Obama-era program that protects undocumented children from deportation is now trying to dismantle it. The president's order would require all children under five taken into the Department of Health and Human Services custody to be placed with a parent or legal guardian. His executive order would require that the Department of Homeland Security (DHS) take steps to detain and remove the children, but the Department of Justice (DOJ) would be responsible for determining whether those children, which include those younger than 18, should be detained in immigration detention centers.
